

LIKE A TREE THROUGH THE CENTURIES

PRACTICE

The educational and experimental forestation with an area of 10.7 thousand hectares is a college structural unit, where students can apply the acquired knowledge in practice and gain skills in working in the forest. All conditions have been created here to organize and conduct educational and industrial practices, educational and research activities. A woodworking workshop has been opened on the basis of the forestation.

The workshop's products are sold both inside the country and exported.

ACTIVITIES OF THE EDUCATIONAL AND EXPERIMENTAL FORESTATION:

- forest monitoring
- fire preventing events
- reforestation events
- forestplanting
- woodprocessing
- sales of products to the home and foreign markets

We are the only college that fully combines the educational process and industrial forestry activities

State Technical University*

Together we will
change the green
world for the better!

ABOUT US

The Forestry College is located in the very center of Polotsk, the oldest town of Belarus, where history and modernity are exceptionally combined.

We are proud of the development of international cooperation and our research work, which makes us a platform for prestigious international events.

In 2021, the college celebrated its 100th anniversary!

To study the profession, we have the most modern equipment, and our educational and experimental forestry facility is a unique base for practical training. It will become a platform for acquiring the first experience in working with forest resources. During their training, all students are given the opportunity to live comfortably in our dormitories.

STUDIES

The college doors are open to anyone who wants to make forest care their profession. During their studies in the specialty "Forestry", students gain knowledge on reforestation and afforestation, participate in activities how to protect and conserve forests, acquire the working profession "Forester 6th category" (boys), "Forester 4th category" (girls).

In the future, they can work in state forestry and forest management institutions, in national parks and reserves.
